dream, create, achieve now anything is possible

WHY DESIGN WITH LUSTRE FX?

Lustre FX challenges the boundaries of traditional building and coating options of the commercial and decorative market. Offering unique metal coatings for interior and exterior surfaces, Lustre FX artistically enriches any building project.

Lustre FX coatings can be applied to almost any substrate. The coating enhances design and construction limitations by providing seamless integration and added strength which allows the substrate to be treated as if it were solid metal. With cost effective and design friendly solutions - Lustre FX is the future.

Don't sell your project short by using restrictive sheet-metal or paint finishes. Complete your vision... bridge the gap between design and functionality, add the distinctive Lustre FX coating to your project, giving it the presence it deserves.

DISCOVER THE POSSIBILITIES

Almost any surface can be coated, including but not limited to, ceramics, timber, plaster, fibreglass, MDF, perspex, concrete, foam and even other metals.

LustreFX coatings are incredibly adaptable: multiple metals can be mixed or layered for interesting effects. High polish, satin, raw and textured finishes are available.

Aluminium, Bronze, Brass, Copper and Iron are the base metals with many variations. Patina options include Rust, Verdigris and Pearl.
